
Inland Shores Planned Development

Lake Wales, Florida

This private community will feature a clubhouse with premier amenities including convenience shopping, a restaurant, library, pools and more.

JSK CONSULTING, INC.'s services for this multi dimensional project included land planning, civil engineering, utility system design and construction management services. This project was designed with its own on-site wastewater and water treatment facilities to provide wastewater and water service to the development as well as the surrounding areas. It also included the revitalization of several existing on-site environmental features which were implemented into the developments recreational amenity package.

Working with SWFWMD JSK CONSULTING, INC. converted several on-site agricultural wells into potable water use wells by implementing hydraulic modeling, water quality sampling and stringent well construction and testing programs. This project also involved detailed negotiations with adjacent landowners in acquiring additional right-of-way and drainage easements necessary for off-site capital improvements.
