## Southeastern University

Lakeland, Florida

*As a result of JSK Consulting's needs assessment, capital improvements to existing infrastructure were determined to be necessary before additional expansion of this College Community could proceed.*

This project included the design and evaluation of a campus wide Master Plan in support of a college community. JSK Consulting, Inc., conducted a development assessment to identify deficiencies in existing infrastructure, recreational facilities, common areas, and needed capital improvements to support the proposed project. As a result of our site assessment, roadway, recreational, and utility infrastructure improvements were determined to be necessary before construction of the project. The 60 acre college community is currently being developed in several phases.
