The LEED Green Building Rating System™ encourages and accelerates global adoption of sustainable green building and development practices through the creation and implementation of universally understood and accepted tools and performance criteria.

GREEN BUILD

Working together with Furr Wegman Architects, P.A., JSK CONSULTING, Inc. helped to design and permit this cutting edge Research & Development Facility to meet Leadership in Energy and Environmental Design (LEED) criteria for the construction of a green building.

Our services for this project included working with the City of Lakeland, Southwest Florida Water Management District, and the Florida Department of Environmental Protection to engineer and permit the construction of this facility. The Surface Water Management analysis model included multiple storm event scenarios and hydraulic analysis of the complex drainage conveyance system to address the permitting concerns of the City and the Water Management District.
