

## Veterans Administration Medical Clinic

Lakeland, Florida

*JSK CONSULTING, Inc. worked with the City of Lakeland, Southwest Florida Water Management District and the Florida Department of Environmental Protection for the engineering, design and permitting of the commercial development.*

Through an integrated project team approach, JSK CONSULTING, Inc. (JSK) worked together with Furr Wegman Architects, P.A. and Rodda Construction, Inc. to design, permit and construct the 20,000 square foot medical facility for the Veterans Administration. The new facility will replace the 4,000 square foot building currently operating in Lakeland, and offer a full complement of specialties similar to the existing Tampa VA Hospital. The first 10,000 SF building is scheduled to open November 2008 and the second, as early as January 2009.

This project involved working in conjunction with several local and state regulatory agencies including: the City of Lakeland, Southwest Florida Water Management District and the Florida Department of Environmental Protection.

The services we provided included the following:

- *Civil/Environmental Engineering:* complete site development design to include: paving, grading and drainage system design and permitting; gravity sewer collection systems design and permitting; preparation of construction plans and a technical standards and specifications project manual; and construction management and administration.

CREATING • IMPLEMENTING • SOLVING
